

exquisite corpse

How the app works, screen by screen.

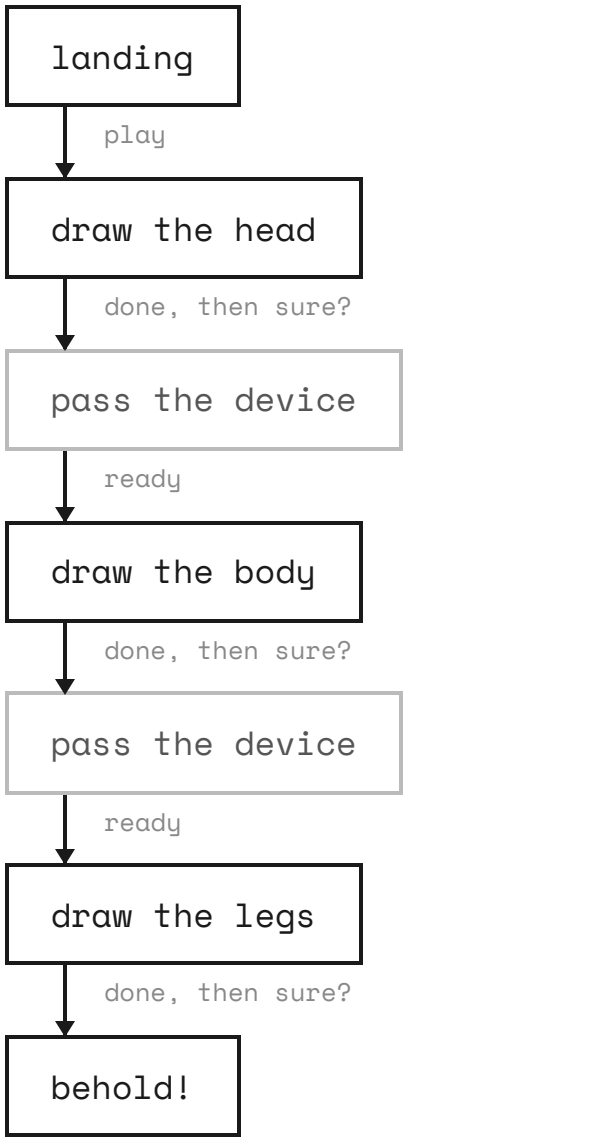

the idea

Exquisite corpse is an old drawing game. Each person draws one part of a figure without seeing the parts before it. The paper is folded so only a sliver shows. When it unfolds, you get one strange creature made by three people.

This app is that game on one phone or tablet. Three players take turns. One draws the head, the next draws the body, the last draws the legs. Each player sees only a thin strip of the previous drawing so they know where to connect. Then the whole figure is revealed.

There are no accounts, no timers, no scores, and nothing is sent anywhere. It works offline. The drawing stays on the device unless someone saves it.

the flow

home, then sure? → back to landing

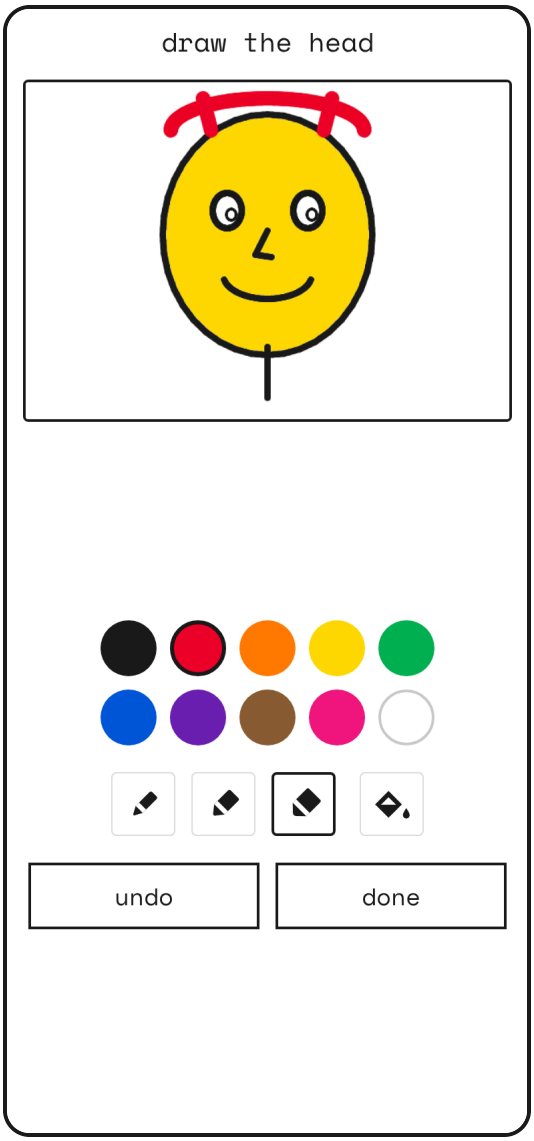

landing

The first thing you see. The name, two squiggles, and one button.

Tap **play** to start a new game. That is the only thing you can do here.

Everything in the app looks like this: black on white, one monospace typeface, squared-off buttons, lowercase.

drawing

The same screen appears three times, once per player. The label at the top says which part to draw: the head, the body, or the legs.

You draw on the white canvas with one finger. A second finger is ignored.

colors

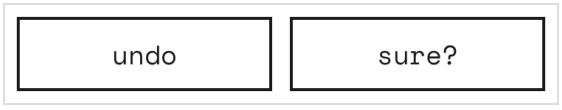

Ten colors. The white one is the eraser.

tools

- Three pen sizes: thin, medium, thick.
- A paint bucket that fills a closed shape with the current color.
- **undo** removes the last stroke or fill. There is no redo.

finishing

Tap **done** and it changes to **sure?**. Tap again to hand off. Touching anything else cancels it. This stops accidental handoffs.

After the first tap on done.

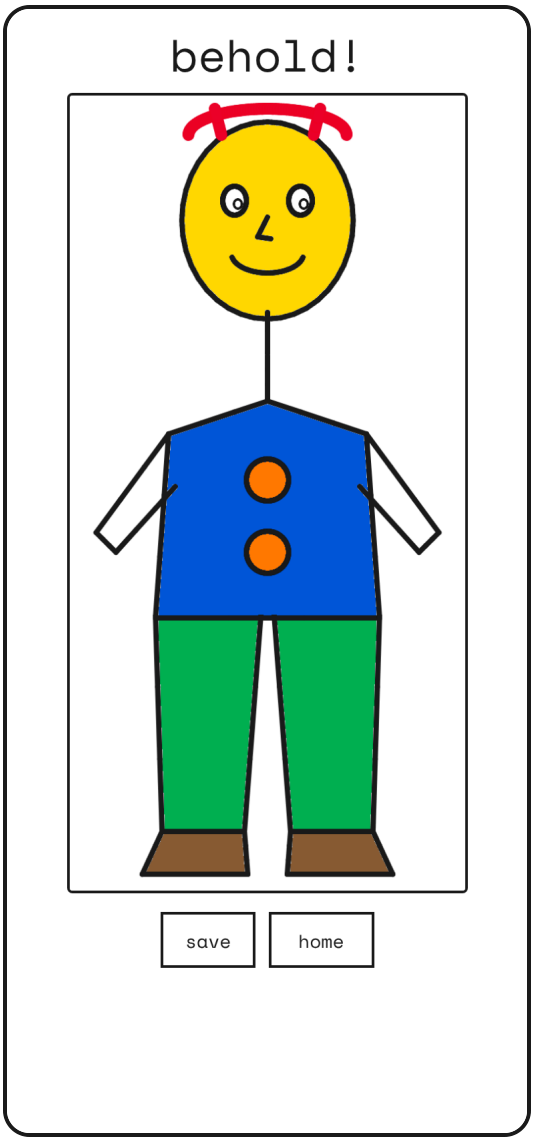

pass the device

Shown between turns. It hides the previous drawing so the next player cannot see it.

The line of grey text says what the next player will draw.

The next player taps **ready** when they have the device. A fresh canvas opens with one clue: the bottom sliver of the previous drawing, about one sixteenth of its height, sits at the top of the new canvas. That is how the neck meets the body and the body meets the legs.

The sliver is part of the canvas. You can draw over it, but undo never removes it.

behold!

After the third player finishes, the three drawings are stacked into one figure and shown for the first time.

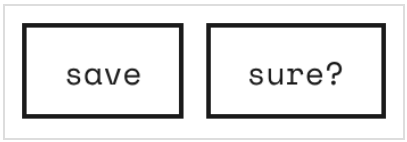

The slivers line up, so the parts join without a seam.

save

Opens the share sheet with the full drawing as an image, with a little white margin around it. From there you can save it to Photos, text it, or AirDrop it.

home

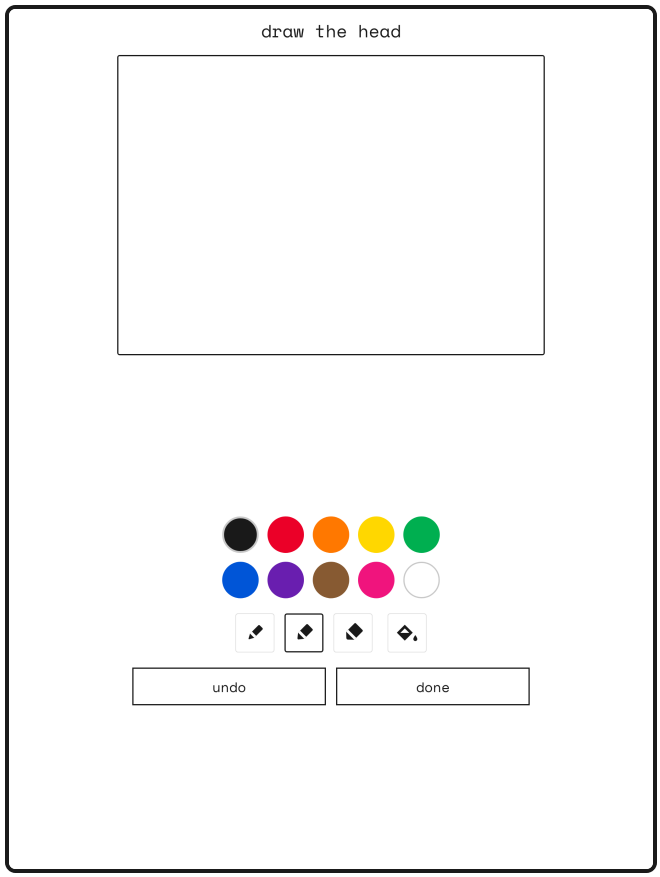

Changes to **sure?** on the first tap, same as done. The second tap returns to the landing screen and the drawing is gone unless it was saved.

After the first tap on home.

on a tablet

On wider screens everything scales up: bigger canvas, bigger swatches, bigger type. The layout and the flow stay the same.

what never changes

- Three players, three parts, one device.
- Nobody sees the earlier parts until the end.
- Two taps to hand off or leave. One tap to do anything else.
- No accounts, no network, no saved games. Each game is a one-off.
